About Me:

I'm a sixth semester student at Lahore Garrison University and a Full Stack Website Developer who develops has developed websites which by all means provide a great user experience.

Key Skills:

- o **Frontend:** Tailwind CSS, Bootstrap, Ajax, HTML, CSS, JavaScript
- o **Backend:** Django, Django REST Framework
- o **Database Management Systems:** MySQL, SQLite, MS SQL Server
- o **Languages:** Python, SQL
- o **Version Control:** Git, GitHub
- o **Additional Skill:** WordPress

Projects:

- o **Recipe Sharing App**: This web application allows users to share recipes alongside saving recipes of other users like we save posts on social media platforms. This application involves user authentication as well as CRUD operations including image uploads as well. In addition to users can apply filters to get specific recipes as well. Additionally, I used uuid instead of regular id in this project. Django and Tailwind CSS were used in this project.
- o **News Website:** In this project I developed a news sharing website which involved user authentication as well as SMTP setup for instances whenever user sign up or deliver a message using contact form. The core of this website is to give its users news from various categories such as Sports, Business etc. Moreover, only authenticated users can read opinions shared on this website.
- o **Blogging Website:** This web app allows users to read blogs of different users as well as writing their own blogs to share with others once they complete the user authentication process. In order to develop this project Django and Bootstrap were utilized.
- o **Online Marketplace:** This online marketplace web app allows users to share their products in order to sell them. Buyers can contact the sellers and have conversation or chat with them accordingly. This tutorial involved Django alongside Tailwind CSS.

Awards:

- o Coding competition winner at Tech Gala 2023 by GITS
